

July 21, 2021

July 21, 2021 | Version 6.2.2 (a2e9aa2343e0)

Features and Enhancements

- Added Normalization (Unnormalized and Normalized) and Mode (Ideal/Distributive) options on the Datagrid page.

Note: The Distributive mode is only applicable for Normalized, thus Normalized will be automatically selected when Distributive is selected.

- Allowed pagination on the Evaluation Progress page.

- Admin Feature: Be able to specify password for System Managers.

Bug Fixes

- Fixed issues on the Dashboard:
 - Participants grid panel has missing columns (Permission, Evaluation Progress).
 - Some Synthesize screen settings are not being applied when a page is added to the dashboard:
 - Selected axis for 2D and Gradient Sensitivities
 - Selected alternatives for Head-to-head Sensitivity
 - Filtered alternatives
 - The leveling of objectives is messed up when editing an objective node from the Objectives panel
- Removed the unnecessary lines on evaluation results steps.
- The last accessed model is being re-opened when returning to some Workgroup Managers pages; even the model has been closed.
- Renamed "Statistic" as "Workgroup Statistics"; Fixed the issue of when selecting an expired workgroup, the user is being redirected to the model's list and can no longer return to the Workgroup Statistics page.
- Changing the sorting on Stack Charts is not being reflected until the page is refreshed manually.
- The "Sorting by Name" on Charts and Sensitivities is incorrect when an element name is an acronym.
- Fixed issues on combined calculations (model dependent).
- The "Edit description" button stays disabled when an alternative is checked.

Expert Choice Comparison® Help Document

- Very long Rating Scale intensity names are displayed on a single line on the TeamTime meeting screen, which is affecting the layout. We truncated the intensity names so the default elements will still be visible.
-
