

Set password policy

- Login as admin or as a user with System Manager permissions
- Add "/install" (without the quotation marks) to the end of the URL you login with; press enter
- The install page loads; click the Settings button on the Install page.
- Check the password policy settings.

Note: If your current admin and system manager (if any) passwords do not conform to the password policy you plan to implement, change the passwords to conform before setting the password policy, or those accounts will be locked out.
