April 28, 2025

April 28, 2025 | Version 6.19.4.04280624 (Build 20250428.7)

Bug Fixes

- **Fix the Sorting by Value on Charts.**Previously, "Sort by value" applied only to the "All Participants" group, with all other selected groups and users inheriting its sorting. After the update, all users and groups are now independently sorted based on their priorities.
- **Fix Collaborative Brainstorming Pros and Cons issue:**Addressed the problem where the "Collaborative Pros and Cons" feature malfunctioned when the model was switched to online mode while the meeting was ongoing. This occurs when copying the invite link, which shows a dialog asking to switch to online.
- **Disable Inapplicable Actions on Evaluation Status page for Disabled Workgroup Users:**The "Get Link" and "Log in as Participants" icons in the Evaluation Status page are now disabled for disabled users in a workgroup. Previously, attempting these actions would redirect to the login page since they are not applicable.
- **Hid disabled users from the Results pages.**Disabled users will no longer be displayed in the participants list selection in the Results screens.
